Remove the 'Our offering' and change the heading to "Four categories supplied across southern africa"

Every line below is supplied on an enquiry basis. Send us the specification and quantity and our team will come back to you with availability, lead time and a written quotation.

Remove the word 'written' here

Maintenance, Repair and Operations (MRO) refers to the equipment, materials and components required to maintain and repair industrial operations. Industries such as mining, construction and manufacturing rely heavily on consistent MRO supply to avoid operational downtime.

Industrial operations depend on reliable supply chains to maintain productivity, equipment performance and operational safety. Our focus is to connect trusted international manufacturers with industrial operations across Southern Africa, ensuring access to critical MRO equipment and components.

Through direct factory sourcing we maintain close alignment with manufacturing processes and quality standards. Our manufacturing partners provide technical expertise, engineering specifications, quality control processes and scalable production capacity — which ensures a reliable supply of high-strength fastening systems for industrial and structural applications.

Under the Understanding MRO paragraph,

1. Please replace the second sentence in the second paragraph:

Our focus is to connect trusted international manufacturers with industrial operations across Southern Africa, ensuring access to critical MRO equipment and components.

With:

“Through our Partnerships we are able to service industrial operations across Southern Africa, ensuring access to critical MRO equipment and components”

2. Remove this first sentence in the last paragraph entirely:

Through direct factory sourcing we maintain close alignment with manufacturing processes and quality standards.

Category 01

FASTENERS

Through our exclusive agreements with leading man

Remove the Category numbering on all of them.

Under Fasteners:

Through our exclusive agreements with leading manufacturers, we supply industrial-grade fasteners ensuring durability, quality and competitive factory-level sourcing. These products are designed for heavy-duty industrial and structural applications — from mining equipment assembly and conveyor structures through to structural steel installations and bridge construction.

1. Remove 'Through our exclusive agreements with leading manufacturers,'

2. Rewrite the entire paragraph as follows:

We supply industrial-grade fasteners ensuring durability and quality. These products are designed for heavy-duty industrial and structural applications, from mining equipment assembly and conveyor structures through to structural steel installations, railings and bridge construction.

demanding environments. Generators provide reliable power solutions where grid power is limited or unavailable — keeping remote sites, processing plants and construction projects running.

KEY FOCUS

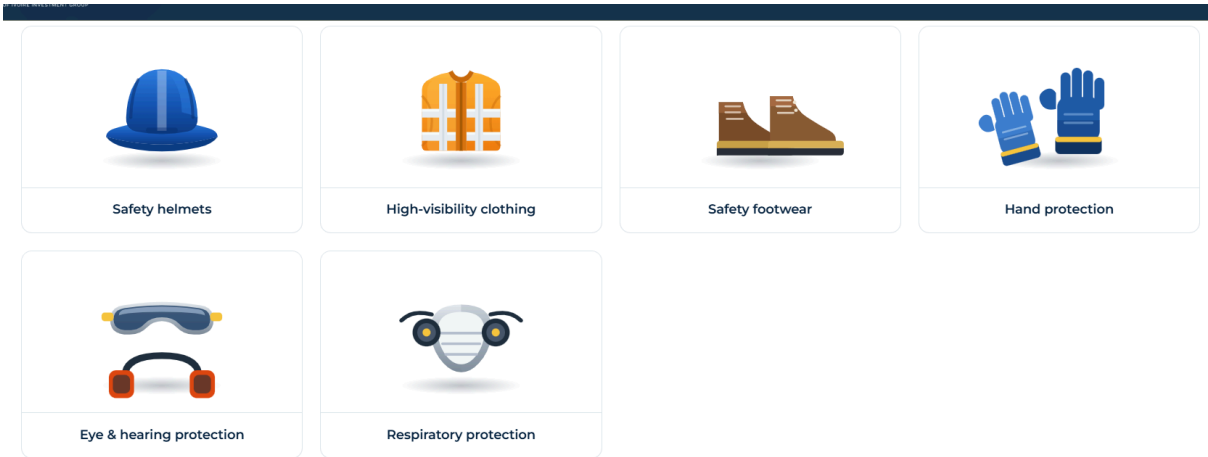

Industrial grade generators

Factory sourcing from international manufacturers

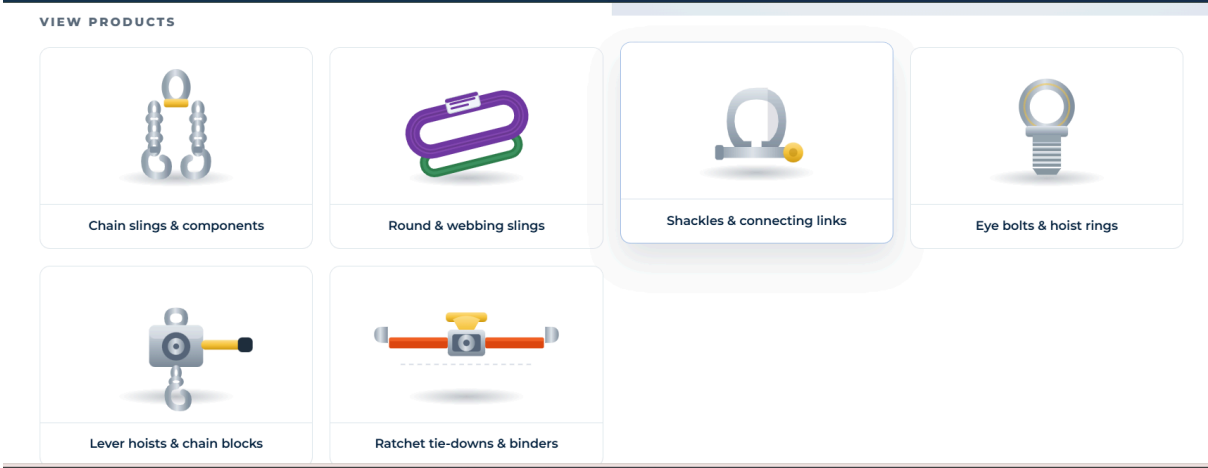

Logistics coordination and delivery

Power solutions for remote operations

Replace "key-focus" with Product range includes

Please replace these with gpt generated images, as you did with the fasteners and generators category.

WHO WE SUPPLY

INDUSTRIES & SECTORS SERVED

Our industrial supply solutions support operations right across the region's productive economy.

MINING

- Equipment assembly
- Processing plants
- Structural

CONSTRUCTION & INFRASTRUCTURE

- Structural steel buildings
- Bridges and heavy

ENERGY & POWER

- Power plants
- Generator installations

MANUFACTURING

- Industrial machinery
- Production plants

TRANSPORT & LOGISTICS

- Rail infrastructure
- Ports and heavy equipment

Make Metallurgical Testing and Process Optimizaion it's own Category:

METALLURGICAL TESTING & PROCESS OPTIMISATION

Through our partnership with Progress Metallurgical Services (PMS), we provide specialised metallurgical testing, laboratory solutions and performance chemicals to support improved mineral recovery and operational efficiency.

- Metallurgical testing and pilot plant services
- Reagents, chemicals, and process optimisation
- Laboratory equipment and modular laboratories

So in total they have 5 categories (the other 4 are products and this one is more of a service).

TALK TO OUR TEAM

Ivoire MRO Solutions is an enquiry-based supplier. Tell us what you need and the quantity, and the team in your country will come back to you with availability, lead time and a written quotation.
